

Base Build-Up

Tree Pits

GeoPaveX Tree Pit packs are designed to provide an attractive permeable paving system using a variety of natural or recycled aggregates.

The GeoPaveX Standard resin binder is mixed with a suitable natural or recycled aggregate with a typical grading of 1/4 to 1/2". (Certain aggregates up to 1" have been used). The aggregate selected must be clean, free of fines, and dry.

The open texture achieved when using the combination of GeoPaveX Standard resin and a suitable aggregate provides a highly permeable surface allowing surface water to drain away and yet still reach the roots.
